Project status (24 Oct 2026, evening)

Done

1. Registration osf.io/qckvr (6 Oct 2026); Updates 1-3 before the v2 analysis; Update 4 (post-analysis disclosure) filed 24 Oct 2026.
2. v2 rebuild from raw data: 7 cohorts; double extraction of 102 coefficients; Ensembl gene identity (overrides, successor IDs, predecessor check); inputs frozen (tag v2-preanalysis, 871d199).
3. Analyses: H1-H3, direction consistency, gene concordance, power, aggregate transportability, sensitivity analyses, pooling-interval sensitivity (scripts 29-37).
4. Repository: v1 files moved to archive_v1/; tests pass; renv snapshot with .renvignore (archive_v1/); openxlsx added.
5. Outputs: script 40 (tables/figures; Table 2 now with age and sex), script 41 (reporting completeness, 2/76; PubMed records of the 76 papers), script 42 (Supplementary Tables S1-S19 workbook).
6. Manuscript: ManuscriptDraft5_v26.docx (user's final file + search date wording "between 12 September and 3 October 2026 (last search 3 October 2026)"). A PubMed run of the query (prognos* written out) gives 402 records published up to 3 Oct 2026, consistent with 404.
7. Supplementary File 1 (search, registration, deviations; date and repository filled), Supplementary File 2 (checklist), Supplementary Figures S1-S2 (results/paper/figures).
8. TRIPOD+AI (+ Abstracts) and REMARK checklists with line numbers from v26 (Methods 79, Results 249, Discussion 342, Declarations 431).
9. Manuscript highlights resolved by the user; line numbers checked in Word (match); workbook verified (19 sheets, row counts correct); final outputs pushed and tagged v2.0-submission (8fee091); Ma Zhongliang credited as co-author on commit 12039eb; repository made public after the AI-marks history check.
10. README rewritten for v2 (versions and tags, layout, reproduction, steps, manuscript items).

Due

1. Commit the new README (with co-author line if wanted) and push.
2. Manuscript: code is now public, so change "will be released on publication at" to "are available at ... (release v2.0-submission)" in Software and reproducibility and in Code availability (tested: no line number moves).
3. Add a LICENSE (decide with supervisor; e.g. MIT for code).
4. Moinul's written agreement on papers 93, 183, 289.
5. Journal choice with supervisor, formatting, cover letter; optional Zenodo DOI for the release.
